ABSTRACT: English, more than any other language, has attracted the interest of professionals and linguists since long. As English becomes the chief means of communication between nations it is crucial to ensure that it should be learned accurately and efficiently, with proper understanding of its structure and use. In this multi-cultural, competent and diverse world with not so strong economy it is the language skills and work knowledge that can help one thrive.

Keywords: *Communication Skills, Knowledge, Training, Global Language, Personality development.*

INTRODUCTION

During the years of studies that all engineering student have to undergo, English is the language of instruction. Engineering student work hard and must attend seminars, lectures etc. which are all in English. The medium of instruction of engineering students is English in all colleges and university in India.

We are in the age of information explosion and information which is hidden is casket of English. There is in fact no exaggeration in the quote “know English- know job and no English – no job”.

The language has become the ministry of all corporation jobs in this country and not knowing it can be a serious handicap. more than half of rural and urban Indian students are poor in English. Because of the importance the language holds in excelling in the workplace, knowing English has become more important than ever in the present.

DISCUSSION

Most books, newspaper and online information about airports and air traffics controls, technology, sports, pop music and advertising are in English. In fact the universal language on the internet is English. It is one of the easiest languages to learn and because it is spoken across many countries, it

makes moving to a different country easier because it is a “global language”. Improving English as a soft skill, the first thing to do is to make an effort at learning the language. So, if you develop a positive attitude towards English, you can certainly improve on it. Practice makes it perfect, so practice daily for greater improvement. Remember the more fun you have with English the easier, it will be to learn.

Personality development has become a modern “culture”. Personality development has a lot to do with soft skills. As there are many corporate trainers who are honing the students in the institutes in the soft skill. Personality development is based on various philosophical tenets including humanism, naturalism, psychology, theory of relativity, scientific management spiritualism and materialism. All have their roles in propagating various views on personality development.

There are various methods for personality development, positive thinking, yoga, meditation, gen yoga, pyramid, astrology, psychotherapy, hypnotism, N.L.P, astropsychology, change management, stress management, naturopathy, reflex therapy, panic healing, aft of living, Osho yoga, and Swastha Bharat, etc. are all methods of personality development [1].

The modern personality development training wherever is taught, has many times forgotten the basic tenets of logic of personality and its development. The scientific theories which propose various packages for the development of human personality should follow the following order in order to get real meaning in its achievement. For any personality development training to be successful, the following must be kept in mind:

- Everyone has personality
- Every personality has potentiality
- Every personality is different in its existence and nature.
- Man’s personality has been distorted / developed by hereditary or environment.
- Personality develops by the will power rooted from strong and logical belief on one-self.

- What is possible for an individual under particular condition is possible for all under the same conditions.
- Practical benefit to the self and society is the ultimate parameter for real success and satisfaction.
- That some achieve great success, is proof to all that others can achieve it as well.

INNOVATION

Innovation and Research is equally important in Education. Educational research should aim at improving educational practice by analyzing the world of Education to understand it and make it better. It should be a critical, reflective and professionally oriented activity. Innovation in education encourages teachers and students to explore, research and use all the tools to uncover something new. It involves a different way of looking at problems and solving them.

The thinking process that goes into it will help students develop their creativity and their problem solving skills. Innovation does not mean creating something from nothing. Just like with any good science project, it relies on researching existing solutions to come up with a new hypothesis to test. Innovation in education represents a significant challenge for educators, curriculum providers, technology providers and governments alike.

CONCLUSION

Organization of all categories looks for dynamic personnel with strong communication to man their key positions. Possessions of effective communication skills is rightly perceived as an important asset to a professional. With the integration of Indian economy with the world economy, liberation and our professional becoming more cosmopolitan in their approach, the importance of communication is bound to grow further.

“Communication” is derived from the Latin word ‘communicare’ [2] which means ‘to import’, ‘to share; and ‘to make common’. It may be defined as an exchange of facts, ideas opinions or emotions between two or more people, Peter Little in his book ‘communication is business’ defines communication as follows:

“Communication is the process by which the information is transmitted between individuals and/or organizations so that an understanding response results”.

Communication may be viewed as the transfer of information from one individual organization to another. It is one of our basic needs and our ability to communicate extensively, distinguishes us from other living beings.

It functions as link between people and is one the chief means of bringing closer. It enables individuals and organization to achieve their objective and goals. It is impossible to imagine organized life or society without communication. The story of the progress of the man is inextricably linked with his ability to communicate.

If a technical student’s English becomes strong, he/she will be able to write correct an official letters and letters to editors, an application for employment, social correspondence, telegrams and advertisements and press releases, notice agenda, minutes, report writing, memorandum, essay writing. A technical student is able to write and speak correct English. Everywhere, every moment, every place, conference, seminars, symposium, debate.

English needs its own environment where kids-growing can understand the meaning of sketch, drawing, picture, and other commonly used words to speak English fluently and confidently. Students should be able to handle his/her English language as a mother tongue. As far as speaking and writing is concerned, vocabulary is very important. In exclusively technical student need terminology of subject.
